BrassCraft®

American-Made Quality

Founded in 1946 by Robert Zell in Detroit, Michigan, BrassCraft Mfg. Co. innovated and perfected the one-piece water supply valve and the flexible water supply tube. Today these products have become the industry standard for residential and commercial plumbing projects. BrassCraft has headquarters and manufacturing facilities in the U.S. We continue to remain competitive through major investments in our manufacturing facilities and by employing American workers.

State-of-the-Art Engineering and Manufacturing

In the competitive environment of manufacturing, we know that we must meet your specifications for cost and quality. Everything we make is engineered for efficient equipment utilization and quality checked to exacting standards. This commitment to quality parts manufactured to the highest standards in tolerance and finish, has earned us our reputation for excellence.

Compliant Solutions for the 2014 No-Lead Law

As of January 4, 2014, Federal Public Law 111-380 prohibits the sale of plumbing fixtures with a wetted surface area containing more than a weighted average of 0.25% lead. This law virtually eliminates the lead content of pipes, pipe fittings, plumbing fittings and fixtures intended to convey or dispense water for drinking or cooking.

BrassCraft Manufacturing has met the new no-lead law head on with a comprehensive range of compliant products including water heater connectors and tankless service valves.

Look for the checkmark ✓ on packaging to verify that the product meets the new no-lead legislation requirements.

Safety+PLUS®

Coated Stainless Steel Gas Connectors with Patented Excess Flow Technology

Safety+PLUS® gas connectors combine advanced corrosion protection with state-of-the-art excess-flow technology to deliver a superior gas connector for home and family.

The Safety+PLUS® excess flow valve (EFV) helps prevent gas fires and explosions due to line ruptures and disconnects at the appliance. When triggered, the Safety+PLUS valve immediately restricts gas flow to a non-hazardous level (bypass flow) to prevent dangerous release of gas into the home.

Gas flow is controlled at the appliance where the problem occurred; the rest of the home's system will continue to function. Once the gas line is properly repaired, the valve automatically restores normal gas flow to the appliance.

- Automatic Valve Activation
- CSA Certified
- 100% Performance Tested
- Automatic Reset

Magnet-Based Technology

Open

Under normal operating conditions, the magnet holds the plate in place, allowing full gas flow to the appliance.

Activated

A gas line rupture results in unrestricted flow of gas, forcing the plate away from the magnet. The plate sits firmly against the seat, immediately restricting gas flow to less than 5 SCFH (bypass flow).

ProCoat®

Coated Stainless Steel Gas Connectors

The ProCoat coating helps protect the stainless steel connector from corrosion due to prolonged exposure to harsh chemicals found in common household cleaning, plumbing repair and building products (ammonia, chlorine, solder flux and muriatic acid). Designed for indoor and outdoor use, ProCoat is resistant to the harsh effects of UV rays and salt.

ProCoat coating is baked on for unequalled corrosion resistance.

Each connector is made of high-tensile strength stainless steel

- Superior Corrosion Resistance
- Greater Strength & Flexibility
- Approved for Indoor and Outdoor Use
- 100% Leak Tested
- CSA Certified

Safety+PLUS®

Appliance Excess Flow Valves

The Safety+PLUS excess flow valve helps protect against gas fires and explosions due to line ruptures or disconnects at the appliance. In the event of either, Safety+PLUS immediately restricts gas flow to a non-hazardous level (bypass) to avert the potential for a dangerous release of gas into the home.

Gas flow is controlled only at the appliance where the problem occurred; the rest of the home's system continues to function. Only once the gas line is properly repaired, the valve's bypass flow automatically pressurizes the gas line to reset the valve and restore gas flow to the appliance.

- Automatic Valve Activation
- Automatic Reset
- Easy to Install
- 100% Performance Tested

NOTE: All Safety+PLUS valves require a minimum inlet pressure of 4" W.C. and are rated at a maximum inlet pressure of 1/2" psig. All Safety+PLUS valves have a maximum 5 SCFH bypass flow rate. Flow rates given are for 0.6 specific gravity natural gas with an average heating value of 1,000 Btu per cubic foot; therefore, 1 kBtu/h is equal to 1 SCFH (standard cubic foot per hour).

*When the excess flow valve is installed in the vertical downward position (flow arrows pointing toward the floor), the closing flow rate is 110,000 Btu/h.

The patented polymer braided jacket is specially engineered to allow the connector to bend freely without kinking or crimping. Easy to install, the connector won't work harden with repeated bending.

Advanced Corrosion Resistance

The polymer braid is specially engineered to resist corrosion from harsh household cleaning and repair products.

No Dielectric Union Needed

The engineered polymer braid and rubber core are non-conductive materials and therefore eliminate the need for a dielectric union.

Less Torque to Seal

Rubber washer is easier to install on rough nipple surfaces.

Longer Connector Nuts

A greater number of thread-to-thread contact provides a better seal to lined nipples.

SPEEDI PLUMB® PLUS BRAIDED WATER HEATER CONNECTORS

Use: For use in exposed locations only to connect water heaters and other water connected devices to the water supply. Not intended for use with recirculating water systems that produce continuous use temperatures above 115° F. For those applications use the BrassCraft® CopperFlex™ or ProCoat® series connectors.

Design Features:

- **Superior corrosion resistance** to harsh chemicals found in common household cleaning and plumbing repair products
- **Greater strength & flexibility.** The patented polymer braid exhibits greater elasticity than stainless steel braiding, significantly increasing the flexibility of the connector
- **No kinking, no crimping.** The polymer braided jacket is specially engineered to bend freely without kinking or crimping the connector
- **Won't work harden** even with repeated bending
- **No dielectric union needed** with installation as the braiding and rubber are constructed of non-conductive materials
- **Longer connector nuts** allow a greater number of thread-to-thread contact and a better seal
- **100% Compliant** 

Operating Specifications:

Temperature: 40° - 140° F, intermittent to 180° F

Pressure: 125 PSI maximum
