

Green Drain™ Waterless Drain Trap Seals

Prevent Gases, Odors, Germs, Pests and Backflows

The Green Drain employs a unique design featuring a silicone rubber seal that acts as a one-way valve. This allows water and debris to flow seamlessly down the drain while effectively blocking the reverse entry of harmful elements like sewer gases, odors, and pests. Unlike traditional trap seals that rely on water, which can evaporate and leave the drain vulnerable, the Green Drain's waterless mechanism ensures continuous protection.

What Are Your Drains Letting In?

- **Pests** that infect food supplies, guest rooms, dining areas, and common areas with bacteria
- **Viruses** and **Bacteria** that spread aerosol, foodborne and waterborne diseases like Covid-19
- **Sewage Odors** and **Backflow** that affects your reputation and supplies
- **Toxic Gasses** that put guest and staff at risk
- **Hygiene** and **Sanitation Risks** costing money and liability exposure

Depleted Trap – Exposed Drain

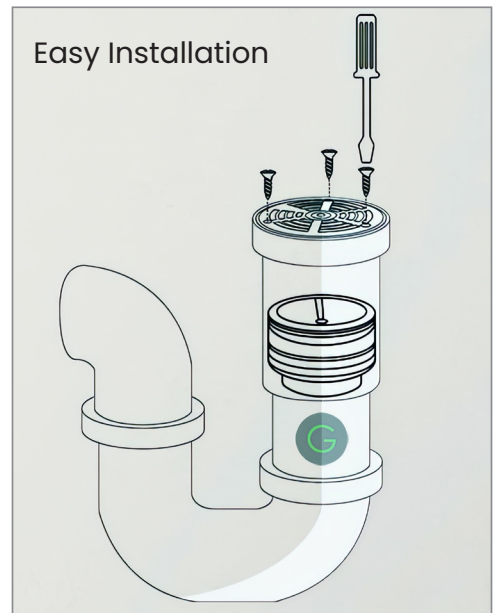

After Waterless Trap Seal

The Green Drain Advantage

- Proactive protection from all sewer contaminants
- Allows installment or removal by anyone in seconds
- Boosts facility sustainability, requires zero water or harsh chemicals
- Maintenance-free
- Saves you from unneeded repair and expenses
- Elevates sanitation as a HACCP/NSF certified product
- Eliminates vulnerability from faulty P-trap

The most certified and accredited waterless drain trap seal.
