SLIP FITTINGS

SharkBite Slip Couplings and Tees are ideal for repairing and tapping into existing rigid pipe lines. The Slip feature ensures the pipe is fully engaged into the fitting when the pipe is in a fixed position. Slip end is only suitable for use with Copper and CPVC pipe.

SLIP COUPLINGS (SLIP END ONLY SUITABLE FOR COPPER AND CPVC)

Slip Couplings are the most efficient way to repair a burst pipe or leak. Slip fittings simply repair by doing the job that two couplings and extra pipe used to do. Only one end of the coupling has a stop, allowing the opposite end to slide freely over the end of a pipe. The fittings can then be released with a disconnect tool and slid back onto the other end of the pipe for a successful connection and leak repair.
